Kairos Targets Seagrass Boutique Hospitality Group in Australia

Web site : seagrasshospitality.com
Date: 2026-02-13
Country : Australia

 @dexpose_io  DeXpose  dexpose.io  **DEXPOSE**

Summary

On **February 12, 2026**, the ransomware group **Kairos** claimed responsibility for a cyberattack against **Seagrass Boutique Hospitality Group** (seagrasshospitality.com), a leading hospitality company in Australia. The group issued a warning that sensitive data would be leaked unless negotiations were initiated.

Incident Report

Field	Details
Target	Seagrass Boutique Hospitality Group
Domain	seagrasshospitality.com
Country	Australia
Attacking Group	Kairos
Date Reported	February 12, 2026
Threat Actor Statement	“The full leak will be published soon, unless a company representative contacts us via the channels provided.”

Recommended Security Actions

Ransomware attacks are increasingly targeting both enterprise and mid-sized organizations across all sectors. The following steps are critical to reduce impact and prevent future incidents:

- **Monitor continuously:** Use DeXpose’s dark web and infostealer monitoring platform to detect breached credentials, leaked databases, and threat actor chatter in near real-time—before damage spreads internally.
- **Conduct a compromise assessment:** Immediately initiate a full incident review to determine how attackers infiltrated your network, what data may have been exfiltrated, and whether any persistence mechanisms remain active.
- **Validate your backups:** Ensure that your backups are current, encrypted, and stored offline. Utilize immutable backup solutions to defend against ransomware encryption and deletion attempts.
- **Apply threat intelligence:** Integrate external threat feeds, including DeXpose-provided indicators of compromise (IOCs), into your SIEM or XDR platforms for real-time alerting and correlation.
- **Harden employee defenses:** Run phishing simulations and enforce multi-factor authentication (MFA) across all access points. Attackers often exploit weak or reused credentials sourced from the dark web.
- **Engage professional response teams:** Involve cybersecurity incident response experts, threat analysts, and legal counsel before initiating any dialogue with ransomware groups or ransom brokers.

How DeXpose Helps You Stay Ahead

At DeXpose, we specialize in early detection and proactive defense. Our hybrid threat intelligence solution combines automated deep/dark web crawling, Telegram and forum monitoring, and real analyst verification to deliver:

- Continuous scanning of ransomware group leak sites, stolen credential markets, and malware log dumps
- Timely alerts for breaches linked to your domains, email addresses, and key personnel
- Intelligence correlation that connects leaked credentials to infostealer malware infections, often weeks before a public ransom demand
- Real-time visibility into supply chain and third-party exposures through passive surveillance of dark web channels

Don't wait for public disclosure or ransom notices—gain visibility into your cyber exposure now.

- **Scan your domain for data breaches:**
